

Fact sheet

QR & Barcode Scanner for Android · verdettoqr.com

What it is

Verdetto is a free QR and barcode scanner for Android: no ads, no accounts, no analytics, no tracking by Verdetto. It shows what a code contains before anything opens, and it reads damaged codes.

Before anything opens

Every scan shows its content and the checks on it: a listed link, a lookalike address, a premium number, an open network, a payment address, a wallet on a scam list. The wording is never "safe"; the no-finding line is "No warnings found".

On the phone

The safety list is a signed bundle checked on the phone; nothing about a scan leaves it unless the person turns on the lookups, which send only a number or a domain with the app's name.

Create

QR codes and barcodes for a person's own use, in their own colors and shapes, with a picture inside, as a code, an outline or a table card; every export reads back on the phone before it is saved, shared or printed.

Formats

Thirty-one kinds of codes measured on the September 4, 2026 validation run, including EAN, UPC, Code 128, Data Matrix, PDF417 and Aztec. A one-second ceiling per read is the standing law.

Where

Google Play, F-Droid and signed GitHub releases, one version everywhere. Eleven languages. Source under GPL-3.0-or-later; the engine under Apache-2.0.

How it is paid for

By the people who use it: a contribution, once or monthly, from \$0.99. Nothing is locked behind it.
